

NEW! Innova IPS Software

Integrated Design & Print production software solution for professionals

Even the best photographers and print makers welcome a some extra help between image capture and output, a guarantee that all the good work they put in at the outset will be matched by the quality of their prints.

Innova Art is launching Intelligent Print System - an integrated design and production printing software for professionals who wish to produce high quality images. Intelligent Print System gives you ease of use and an intuitive interface as well as a comprehensive list of functions.

Features and benefits of Innova's Intelligent Print System:

Mac and PC compatible

This simple, cost effective software is easy to install and use, with straightforward, step-by-step instructions, wizards and templates. It is fully compatible with both Mac and PC and works with the full range of file formats.

Auto nesting and job management

Intelligent Print System includes print drivers for the latest Canon, Epson and HP professional large-format printers to get the best out of your hardware and makes the most efficient use of media with 'auto nesting' and job management to ensure minimum paper wastage and optimum production.

Full colour management with built-in ICC profiles

Intelligent Print System offers full colour management with built-in ICC profiles to support a wide range of media, including all Innova Art products; from the award-winning Fibaprint papers and acclaimed digital canvas range.

JetMaster Display Templates

Intelligent Print System also includes templates for Innova Art's ingenious JetMaster display system – a unique, cost effective kit that transforms great images into stunning, lightweight gallery wraps in minutes. It features unique functions for automated canvas wrapping (mirroring), enabling the creation of sought after triptych and mosaic prints, perfectly segmented, wrapped and mirrored for high-impact displays.

Print Engine

The integration of the Adobe PDF library with the Intelligent Print System technology means that no matter what print jobs are thrown at the system it will process and print these jobs accurately, quickly and easily each time.

IPS – minimum system requirements

Mac OS10.4 (Tiger)

- G5 (PowerPC) / MacPro (Intel)
- 1Gb RAM, 80Gb, USB2
- Monitor 1024 x 768, 24 bit colour

MS Windows® 2000 Sp 4 / XP SP2 / VISTA / Windows 7

- Intel Pentium® IV
- 1Gb RAM, 80Gb, USB2
- Monitor 1024 x 768, 24 bit colour

Formats

Remote login function for users who need support from a dedicated team

Auto Updating

The IPS software and the ICC media profiles are automatically updated

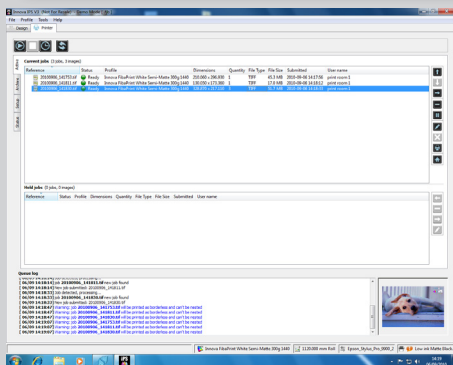

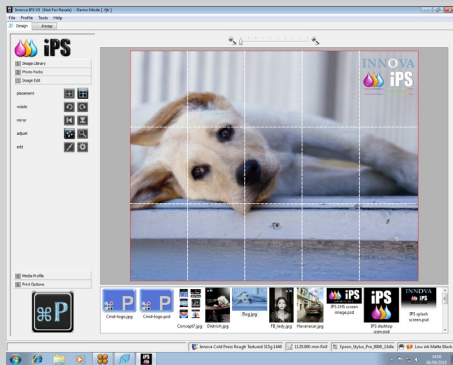

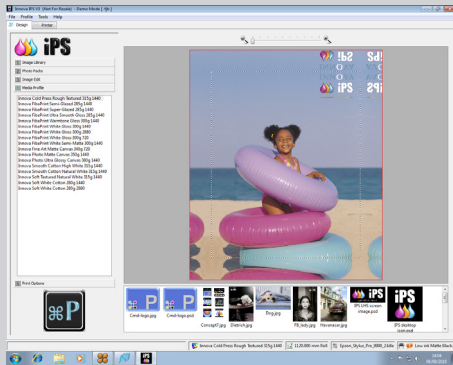

iPS

INTELLIGENT PRINT SYSTEM

control your print

Integrated Design & Print production software solution for professionals

How Does It Work?

Create your image libraries for easy browsing and access. Select from the range of pre-defined photo packs, or add your own custom made photo pack using the easy Photo Pack Editor.

Fill, fit zoom & pan, rotate, mirror your images to create your perfect print layout.

Select a media profile from the comprehensive ICC profile list supplied to achieve excellent colour matching and optimised printer settings

Retouch your image using the accurate built-in image editor. Finally set the quantity, print marks etc. and send to print.

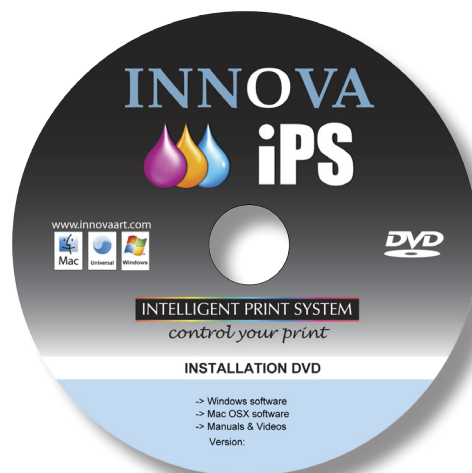

Additional "plug ins" are available

- Colour module – allowing the user to create their own custom media profiles
- Hot Folder system – allows the user to automate their work flow
